

KUDZU - SOUTHERN REVENGE

The Kudzu vine (*Pueraria thunbergiana*) was imported from Japan to control erosion in parts of the South. In most areas it is the most rapid growing of all vines and in a quiet location the growth can actually be heard.

Dear Dr Henny;

Why not label 'milk' as to show what it comes from. I.e, cows milk, soy milk, nut milk, coconut milk, oat milk and rice milk?

I'm trying to stop using 'cows' milk and this would help!
